OBJECTIVE

I am a B.Tech student at VIT-AP University with a CGPA of 9.01, passionate about software development and backend engineering. With hands-on experience in building impactful projects like Query vault(rag chatbot) using vector databases and JavaScript , including a face recognition application using python and basic crud apps and have strengthened my skills Java, Python, MySQL, and data structures and algorithms. My problem-solving abilities are highlighted by my competitive programming journey on LeetCode with 500+ problems solved. Eager to contribute to innovative backend solutions and optimize system performance.

SKILLS

Programming Languages	Java, Python, Javascript
Frameworks	Spring Boot , node.js
Core Concepts	Data Structures and Algorithms, OOP
Databases	SQL, Mongodb, Pincone (vector database)
Developer Tools	Git, Postman
Other	REST APIs, Backend Development

EXPERIENCE

Software Engineer Intern Present
Krittya Live | GitHub

- Built a Retrieval-Augmented Generation (RAG) based conversational chatbot to answer organization-specific queries using internal documents.
- Improved response relevance by approximately 35% through efficient document chunking, embedding strategies, and vector-based retrieval.
- Designed backend APIs to handle document ingestion, query processing, and response generation.
- Worked closely with product and engineering teams to integrate the chatbot into existing workflows.

PROJECTS

RAG-Based Conversational Chatbot GitHub
Built an AI-powered chatbot using Retrieval-Augmented Generation to answer questions from large document collections. Achieved over 90% contextual accuracy in internal testing and significantly reduced manual support effort.

Medicare Appointment Booking Website Live | GitHub
Built a healthcare appointment booking web application that enables users to schedule doctor consultations and manage patient information efficiently. Implemented backend logic for appointment handling, data management, and smooth user workflow integration.

Backend CRUD Systems

Built scalable backend systems implementing complete CRUD functionality using Spring Boot and Express.js. Designed RESTful APIs, input validation, and SQL database integration using MySQL and MongoDB. Focused on clean architecture, modular routing, and efficient query handling.

EDUCATION

Bachelor of Technology (B.Tech), VIT-AP University 2023 – Present
CGPA: 9.0 / 10.0

Intermediate Education, Narayana Junior College 2021 – 2023
Board Percentage: 98%
