KUSHWANTH MASUPALLI

+91 95733 26339 masupallikushwanth2005@gmail.com LinkedIn GitHub LeetCode

EDUCATION

Bachelor of Technology (B.Tech), Computer Science 2023 – 2027
VIT-AP University
CGPA: 9.08 / 10.0

Intermediate Education 2021 – 2023
Narayana Junior College
Board Percentage: 98%

SUMMARY

Backend-focused developer who has built and shipped RAG-based conversational systems, real-time telemetry/event-processing backends, and full-stack CRUD applications using Express,SQL/NoSQL databases. Solved 500+ problems on LeetCode, reflecting strong data structures and algorithms fundamentals.

SKILLS

Programming Languages	Java, Python, JavaScript
Frameworks	Spring Boot, Node.js
Core Concepts	Data Structures and Algorithms, OOP
Databases	SQL, MongoDB, SQLite, Pinecone (vector database)
Developer Tools	Git, Postman, Docker,kubernetes
Other	REST APIs, RAG Pipelines, Backend Development

EXPERIENCE

Backend Developer Intern, Upfront May 2026 – Present

- **DRDO FDR Backend:** Built a Node.js/Express backend to ingest Flight Data Recorder CSV exports (200+ parameters) and serve telemetry replay via REST endpoints with time-range filtering, downsampling, and a threshold-based event detector flagging 19+ flight-safety events by severity.
- **viciECM:** Built a FastAPI backend enabling multiple organizations to upload documents and query them through a shared Pinecone Assistant, using metadata filtering to enforce strict per-organization file isolation.

Software Engineer Intern, Krittya Jan 2026 – Apr 2026

- **Medicare:** Built a healthcare appointment booking platform (Node.js, Express, MongoDB) allowing users to look up doctors by department, check live slot availability, and book appointments with double-booking protection.
- **Krittya Chat Bot Backend:** Built a RAG-based chatbot for the agency using Express.js, Pinecone, and Google Gemini AI, improving response relevance by approximately 35% through efficient document chunking and vector-based retrieval.

PROJECTS

DevPulse – GitHub Activity Tracker GitHub
Built a system that listens to GitHub push and pull-request webhooks, automatically scores contributions by parsing commit/PR type and difficulty tags, and stores activity in MongoDB. Built a live leaderboard dashboard along with per-user activity and repo-issue endpoints backed by the GitHub REST API.

Siren AI – Emergency Detection Backend GitHub
Built a proof-of-concept backend that extracts key frames and audio from uploaded video via FFmpeg, combines a frame with a live browser-generated speech transcript, and calls the Gemini API to classify whether a clip depicts an emergency along with a confidence score.
