SUMMARY

Computer Science undergraduate at VIT-AP with a CGPA of 9.08 and a strong grounding in data structures, algorithms, and object-oriented design. Backend developer who works primarily in Java and Spring Boot, with internship experience building APIs and integrating LLM-based features. Enjoys solving hard problems, learning how systems work under the hood, and writing clean, maintainable code.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science 2023 – 2027
VIT-AP University
CGPA: 9.08 / 10.0

Intermediate Education 2021 – 2023
Narayana Junior College
Board Percentage: 98%

SKILLS

Programming Languages	Java, Python
Frameworks	Spring Boot, Spring Cloud
Core Concepts	Data Structures and Algorithms, OOP
Databases	SQL, MongoDB, Redis, Pinecone (vector database)
Developer Tools	Git, Postman, gRPC
Cloud & DevOps (familiar)	Linux , Docker, Kubernetes, AWS, CI/CD Pipelines

EXPERIENCE

Backend Developer Intern, Upfront May 2026 – Present

- **DRDO FDR Backend:** Engineered a Spring Boot backend to ingest Flight Data Recorder CSV exports (200+ parameters) and serve telemetry replay via REST endpoints with time-range filtering and downsampling, plus a threshold-based detector flagging 7+ flight-safety events by severity.
- **viciECQA:** Built a multi-tenant document QA platform: a Spring Boot API gateway (JWT auth) routing over gRPC to a Python/Pinecone Assistant service, with org-scoped metadata filtering keeping each organization's documents and chat answers isolated.

Software Engineer Intern, Krittya Jan 2026 – Apr 2026

- **Medicare Backend:** Built a healthcare appointment booking platform (Java, Spring Boot, MongoDB) with REST APIs for looking up doctors by department, viewing available slots, and booking appointments.
- **Krittya Chat Bot Backend:** Implemented a RAG-based chatbot for the agency using Express.js, Pinecone, and Google Gemini AI, applying efficient document chunking and semantic vector retrieval to return accurate, context-aware responses.

PROJECTS

URL Shortener GitHub
Built a URL shortening service generating compact Base62 short URLs, storing mappings in MongoDB with Redis caching for low-latency lookups, on a layered Spring Boot backend.

Library Management Microservices GitHub
Built a Spring Cloud microservices topology for a library system: Eureka discovery, a centralized Config Server, and a Spring Cloud Gateway routing to independent user, book, and order services.
